[Profile](#) | [LinkedIn](#)

Software Development Engineer with 3+ years of experience designing, building and owning scalable, high-availability distributed systems in Payments and FinTech domain. Experienced in end-to-end SDLC, microservices architecture, RESTful APIs, cloud-native development on AWS, and SaaS-based platforms. Strong expertise in Java, Spring Boot, SQL, Elasticsearch, Kafka, and production system reliability. Passionate about leveraging AI-assisted development tools and custom AI agents to improve engineering productivity and ship smarter.

EDUCATION

Harcourt Butler Technical University (HBTU), Kanpur, UP

2018 - 2022

B.Tech. (Computer Science and Engineering) | CGPA - 7.85 / 10

Coursework: DSA, DBMS, OS, Computer Networks, C, C++, Algorithm analysis, Software Engineering

WORK EXPERIENCE

Software Development Engineer (Blackbuck)

Mar 2025 - Present

Payments | FASTag

- Led end-to-end architecture, design, development and delivery of **BBPS integration** (HLD → production), enabling third-party FASTag recharges, supporting recharge transactions across multiple providers; ensured scalability, regulatory compliance (NPCI), and seamless settlement flows.
- Designed and implemented scalable microservice-based payment workflows handling settlement, reconciliation and transaction lifecycle management. Implemented **AutoPay (e-mandate) system**, integrating Juspay for mandate creation, tokenisation, and recurring payment orchestration with high reliability.
- Strengthened payment reliability through robust error handling, idempotency controls, retry mechanisms, and transaction lifecycle management.
- Worked with AWS-based infrastructure supporting scalable microservice and payment processing systems.
- Collaborated with Product, QA and cross-functional teams in Agile/Scrum environment throughout the SDLC.

Software Development Engineer (Paytm)

2022 - 2024

Tech-Merchant team

- Designed, developed and maintained RESTful APIs serving high-scale merchant onboarding and management systems handling over 0.5 million requests daily.
- Optimised backend performance by migrating data retrieval workflows from relational databases to Elasticsearch, reducing response times by 25%.
- Built scalable GIS-based agent assignment solutions improving operational efficiency and territory management accuracy by using polygon territory management system.
- Participated in architecture discussions, code reviews and design decisions following Object-Oriented Design principles and coding best practices.
- Troubleshot complex production issues, analysed system bottlenecks, implemented performance improvements, and contributed to continuous improvement initiatives focusing on scalability, maintainability and system reliability.

Software Engineer Intern (Paytm)

January - July 2022

As an back-end intern, compiled and maintained operational excellence reports, providing key insights into system efficiency and worked actively in resolving software defects, ensuring the reliability of system components.

AI-Assisted Engineering

- Built a Codebase Knowledge AI using Retrieval-Augmented Generation (RAG) to enable natural-language querying over software repositories by implementing repository ingestion, vector indexing, semantic retrieval and context-aware answer generation.
- Worked with team to built internal AI-powered productivity solutions including release validation workflows (PR checks, deployment steps, database/config verification), automated RCA support tooling, reducing manual effort across project planning, production readiness and incident triage.
- Worked on internal AI-assisted workflows for software delivery by developing reusable Claude Code skills and developer automation pipelines, enabling requirement interpretation, implementation planning, code analysis, test generation and release validation to accelerate development and improve delivery quality.

ACADEMIC PROJECTS

◆ Twitter Clone: Scalable Social Media Platform([Project link](#))

Developed a user-friendly Twitter clone. It allows users to register, login, post tweets, retweet and view profile.

- **Tech Stack:** Spring MVC, Java, MySQL, HTML, CSS

◆ Library Management System ([Project link](#))

Designed a simple Book Store website featuring a homepage, user sign up and cart system and complete orders.

- **Tech Stack:** HTML, CSS, Javascript.

◆ Advanced Product Recommendation System ([Project link](#))

Engineered a content-based recommendation system. Applied NLP Models to recommend similar products on e-commerce websites by using Amazon product advertising API.

- **Tech Stack** - Python, BoW, TF-IDF, Word2Vec, NLP

SKILLS

- Programming languages: Java, Python, C/C++, SQL
- Backend Technologies: Spring Boot, Spring MVC, Hibernate, REST APIs, Microservices, Kafka
- AWS and SaaS: AWS, Cloud-native Applications, SaaS Platforms, Distributed Systems
- AI & Developer Productivity: Retrieval-Augmented Generation (RAG), LLM Applications, LangChain, Prompt Engineering, Vector Databases (Chroma), AI-Assisted Development, Developer Automation, Claude Code, GitHub Copilot, Codex, Windsurf, Kiro
- DevOps and CI/CD: Git, Bitbucket, Jenkins, Docker, CI/CD Pipelines
- Database: MySQL, PostgreSQL, Elasticsearch, MongoDB, NoSQL
- Developer Tools: IntelliJ, Postman, JIRA, Kibana, Grafana, NewRelic, Confluence

ACHIEVEMENTS/ CERTIFICATIONS

- Certification of 'Advance Diploma in Computer Applications'
- Received '**Stand Out Performer award**' for my efficient performance in Blackbuck.
- Earned the '**Rising Star Certificate**' for my contribution at Paytm.
- Solved 300+ coding problems on various platforms.
- Technical content writer from Sahu Technologies.
